Lucky Money	KAGaming	442188	progressive, crash / instant	Demo, RM
Abyss Dimension	KAGaming	424852	progressive, crash / instant	Demo, RM
Wheel	Tadagaming	393512	progressive, crash / instant	Demo, RM

Crash and instant games - Main parameters

Parameter	Value
Crash games catalogue	424 Crash Games entries in the Polish showcase, 24 entries in the saved first snapshot.
Games and providers	Aviator - Spribe, JetX - Smartsoft, Chicken Road 2.0 - InOut, Tower Rush - Galaxsys, Mines - 100HP Gaming or Poggiplay in different cards.
Round mechanics	In Aviator the bet is placed before the start, after which the multiplier grows. Cashing out before the crash returns the stake × the chosen multiplier; without a cash out before the crash the bet loses.
Betting window	The bet is accepted in the pre-start window of the Aviator round. In calculation Aviator FLG-M-G02 the window is open 7.2 s before the round starts.
Simultaneous bets	FLG-M-G02 records two separate bets in the same round: 10 PLN and 6 PLN on two panels before the shared multiplier starts.
Manual cash out	Cash Out closes the selected active bet when the requested cash out is accepted before the crash; the result equals the stake × the accepted multiplier.
Auto cash out	On a separate panel a confirmed target of ×2.10 is set before the round. On a crash at ×1.94 there is no payout, since the target multiplier was not reached.
Bets and payouts	In the verified Aviator PLN configuration: the eligible bet is from 1 to 195 PLN per panel, the confirmed payout limit is 13500 PLN per panel. In FLG-M-G02, the panels were accepted at 10 and 6 PLN.
RTP at the operator	In the verified Aviator configuration, an RTP of 96.34% is accepted. This is a confirmed long-term parameter of the game; the result of a single round of FLG-M-G02 does not measure it.
Demo and history	Aviator, JetX and Chicken Road are marked "Demo, RM". In the verified Aviator profile the visible feed contains the last 16 rounds; a specific money transaction is verified in the history by round ID.
Bonuses and VIP points	For bonus money, games marked Real Money or Jackpot are excluded according to the FAQ. Club points accrual on one's own bets is verified separately from wagering, and the Terms set separate rules for wagering a deposit in crash.

Crash and instant games - Additional parameters

Parameter	Value
Partial cash out	In FLG-M-G02 a manual close of the entire amount of one panel gave 17.20 PLN, the second panel kept an independent outcome. In the verified route there is no partial close of an arbitrary share of one panel.
Availability of auto-bet	In FLG-M-G02 auto-bet is disabled, and automatic cash out is set separately on the second panel. If auto-bet is available, the presets of a new bet are verified before the next round.
Differences between crash and instant	In Aviator the player locks in the multiplier before the shared crash. In the instant game Dice the result is computed on a separate roll, while Mines works by step-by-step revealing of cells.
Interrupted round	After reconnecting, the client verifies in History the status of the server round and the acceptance of Cash Out. Resubmitting a bet does not recalculate the previous round.
